## **Mouse Monoclonal Antibody to**

# STAT6 (phospho-Tyr 641)

## **clone 16E12**

Order No.: 0079-100/STAT6-16E12

Size (μg) 100 Lot No.: 0079S

03/080507F

Mol. Weight **Ref.Cell Line** Isotype **Species Reactivity Applications Epitope Immunogen** IgG1 human WB. ELISA, 100 kDa HepG2 phosphotyrosine 641 phosphopeptide ... G R G pY V P A ... **IHC** conjuagted to KLH

#### **Background and Specificity:**

The STAT proteins serve as both cytoplasmic signal transducers and nuclear activators of transcription. STATs are mediators involved in cytokine signalling. In response to a specific cytokine signal, STAT proteins are phosphorylated on conserved tyrosine residues. Phosphorylated STAT proteins dimerize via their SH2 domains and move to the nucleus. The STAT dimers bind to specific DNA elements resulting in transcriptional regulation of downstream target genes.

STAT6 is activated primarily by IL-4 and IL-13. Upon activation, STAT6 is phosphorylated at tyrosine 641 by Janus Kinase (JAK). Phosphorylated STAT6 forms head-to-tail heterodimers and translocates to the nucleus where it paricipates in transcriptional control.

**Mab STAT6-16E12** specifically recognizes activated STAT6 phosphorylated at Tyr 641 at 100 kDa. The antibody does not crossreact with non-phosphorylated form of STAT6 nor with unrelated phosphorylation sites.

**Purification:** The antibody was purified from serum-free cell culture

supernatant by subsequent thiophilic adsorption and size

exclusion chromatography.

Formulation: Iyophilized from 1 ml 2 x PBS / 0.09 % Na-azide / PEG and

Sucrose.

**Reconstitution:** Reconstitute with 1 ml H<sub>2</sub>O (15 min, RT).

**Stability:** For long-term storage, freeze lyophilizate upon arrival (-20°C).

Upon reconstitution, aliquote and freeze in liquid nitrogen; reconstituted antibody can be stored frozen at -80°C up to 1 year. Thaw aliquots at 37°C. Thawed aliquots may be stored at 4°C up to

3 months.

Avoid repeated freeze / thaw cycles.

Positive Control: #0815: Cell lysate from IL-4-treated HepG2 cells

**Immunoblotting:** 1  $\mu$ g/ml for HRPO/ECL detection

Recommended blocking buffer: Casein/Tween 20 based blocking and blot incubation buffer, e.g. nanoTools product

#3031-500/CPPT or #3031-3000/CPPT.

Immunoprecipitation: ND Immunocytochemistry: ND

**ELISA:** use at 0.05 μg/ml

All products are supplied for research and investigational use only. Not for use in humans or laboratory animals.

#### Phosphospecificity

Whole cell lysates of untreated (lane 1) and IL4-treated (lane 2) HepG2 cells were applied to SDS-PAGE and transferred to a PVDF membrane. The immunoblot was probed with mab STAT6-16E12 at 1µg/ml for 1h at 15-22°C and developed by ECL (exposure time: 3min).
