

MOUSE IgG1 isotype control Biotin conjugated - 010-0640
Code: 010-0640

Size: 100 µg

Product Description: MOUSE IgG1 isotype control Biotin conjugated - 010-0640

Concentration: 0.5 mg/mL by UV absorbance at 280 nm

PhysicalState: Lyophilized

Label	Biotin
Buffer	0.02 M Potassium Phosphate, 0.5 M Sodium Chloride, pH 7.2
Reconstitution Volume	100 µL
Reconstitution Buffer	Restore with deionized water (or equivalent)
Stabilizer	10 mg/mL Bovine Serum Albumin (BSA) - Immunoglobulin and Protease free
Preservative	0.01% (w/v) Sodium Azide
Storage Condition	Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.
Synonyms	biotin conjugation Mouse IgG1 subclass isotype control, Mouse IgG1 isotype control
Application Note	Mouse IgG1 isotype control can be utilized as a control or standard reagent in Flow cytometry, Western Blotting, and ELISA experiments where determination of sample isotype is important.
Background	Isotype control Mouse IgG1 is important for Flow Cytometry. Mouse IgG1 control has no specificity for target cells within a particular experiment. Their purpose is to confirm the specificity of primary antibody binding that it is not a result of non-specific Fc receptor binding to cells or other cellular protein interactions. Isotype controls need to be matched to the specific primary Abs (species and isotype, including heavy and light chains) being used.
Purity And Specificity	This product has been prepared from in vitro cell culture by selective precipitation. In an Ouchterlony double diffusion assay the material is non-reactive with antisera to mouse IgG2a, IgG2b, IgG3, IgM, and IgA. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-biotin, anti-Mouse IgG, and anti-Mouse serum. Typically, less than 1% cross reactivity was detected by ELISA against other mouse and human heavy or light chains isotypes using chain specific antibodies.
Assay Dilutions	User Optimized
FLISA	User Optimized
IF Microscopy	1:1000-1:5000
Flow Cytometry	1:1000-1:5000
Other Assays	User Optimized
Expiration	Expiration date is one (1) year from date of opening.
