**Mouse Monoclonal Antibody to** 

STAT3 (phospho-Ser 727)

# clone 23G5

0145-100/STAT3-23G5 Order No.:

100 Size (µg) 0145S Lot No.:

03/080507F

Mol. Weight **Ref.Cell Line** Isotype **Species Reactivity Applications Epitope Immunogen** IgG1 human, mouse, rat, WB. ELISA, 92 kDa HepG2 phosphoserine 727 phosphopeptide ..LPMpSFRT... IHC conjugated to KLH dog

### **Background and Specificity:**

The STAT proteins serve as both cytoplasmic signal transducers and nuclear activators of transcription. STATs are mediators involved in cytokine signalling. In response to a specific cytokine signal, STAT proteins are phosphorylated on conserved tyrosine residues. Phosphorylated STAT proteins dimerize via their SH2 domains and move to the nucleus. The STAT dimers bind to specific DNA elements resulting in transcriptional regulation of downstream

Besides tyrosine phosphorylation, STAT3 activity is regulated by serine phosphorylation at serine 727. Recent reports indicate that both MAP kinase and SAP kinase induce phosphorylaton at serine 727.

Mab STAT3-23G5 specifically recognizes STAT3 phosphorylated at Ser 727. The antibody does not crossreact with the non-phosphorylated form of STAT3 nor with unrelated serine-phosphorylated proteins. Mab STAT3-23G5 is suitable for Western blot and ELISA applications.

The antibody was purified from serum-free cell culture **Purification:** 

supernatant by subsequent thiophilic adsorption and size

exclusion chromatography.

Formulation: lyophilized from 1 ml 2 x PBS / 0.09 % Na-azide / PEG and

Sucrose.

Reconstitute with 1 ml H<sub>2</sub>O (15 min, RT). Reconstitution:

For long-term storage, freeze lyophilizate upon arrival (-20°C). Stability:

Upon reconstitution, aliquote and freeze in liquid nitrogen; reconstituted antibody can be stored frozen at -80°C up to 1 year. Thaw aliquots at 37°C. Thawed aliquots may be stored at 4°C up to

3 months.

Avoid repeated freeze / thaw cycles.

**Positive Control:** #0812: Cell lysate from pervanadate-treated HepG2 cells

Immunoblotting: 0.5 µg/ml for HRPO/ECL detection

Recommended blocking buffer: Casein/Tween 20 based blocking and blot incubation buffer, e.g. nanoTools product

#3031-500/CPPT or #3031-3000/CPPT.

Immunoprecipitation: ND ND Immunocytochemistry:

**ELISA:** use at 0.1 µg/ml

> All products are supplied for research and investigational use only. Not for use in humans or laboratory animals.

#### Phosphospecificity

Whole cell extracts of control (1), EGF stimulated (2) or pervanadate treated (3) A 431 tumor cells were applied to SDS-PAGE (ca 20.000 cells per lane) and transferred to a PVDF membrane. The immunoblot was probed with mab STAT3-23G5 (0.5 µg/ ml) for 1h at RT and developed by ECL (exp. time: 30 sec).
