

BCIP, p-toluidine salt

Catalog No: 02291
Lot No: XXXXX
Cas No: 6578-06-9
Formula: C₈H₆BrClNO₄P · C₇H₉N
MW: 433.64
Supplied as: solid
Stability: store at -20°C, protect from light

Background

5-Bromo-4-chloro-3-indolyl phosphate (BCIP, X-phosphate, XP) is an artificial chromogenic substrate used for the sensitive colorimetric detection of alkaline phosphatase activity. Alkaline phosphatase hydrolyses BCIP to 5-bromo-4-chloro-3-indole and inorganic phosphate. BCIP is oxidized by atmospheric oxygen to form the blue dye 5,5'-dibromo-4,4'-dichloro-indigo. It is also oxidized by nitroblue tetrazolium (NBT), which forms an insoluble dark blue diformazan precipitate after reduction.
