Background

GDF10 is a member of the BMP family and the TGF-beta superfamily. GDF10 is expressed in femur, brain, lung, skeletal, muscle, pancreas and testis, and has a role in head formation and possibly multiple roles in skeletal morphogenesis. In humans, GDF10 mRNA is found in the cochlea and lung of fetuses, and in testis, retina, pineal gland, and other neural tissues of adults. The BMP family members are regulators of cell growth and differentiation in both embryonic and adult tissues. These proteins are characterized by a polybasic proteolytic processing site which is cleaved to produce a mature protein containing 7 conserved cysteine residues.

Description

GDF10 human recombinant produced in *E. coli* is a single, non-glycosylated, polypeptide chain containing 111 amino acids (369-478) and having a total molecular mass of 12.5 kDa. GDF10 is purified by proprietary chromatographic techniques.

Physical Appearance

Sterile filtered colorless solution.

Formulation

The GDF10 solution (0.5 mg/ml) contains 10 mM sodium citrate (pH 3.5), 1 mM DTT, 40% glycerol and 0.1 M NaCl.

Stability

GDF10, although stable at 4°C for 4 weeks, should be stored desiccated below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.
