<b>PRODUCTION PROCEDURES</b>	The antibody to rabbit IgG was isolated by affinity chromatography using antigen coupled to agarose beads. Fab fragments were generated using a papain digestion. Fc fragments and whole IgG molecules have been removed. Fab fragments were conjugated to fluorescein isothiocyanate (FITC).

Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.

By immunoelectrophoresis and ELISA this antibody reacts specifically with rabbit IgG and with light chains common to other rabbit immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. This antibody may cross react with IgG from other species.
