PRODUCTION PROCEDURES

Antibody was affinity purified using an epitope specific to EWS immobilized on solid support.

The epitope recognized by A300-416A maps to a region between residues 1 and 50 of human Ewing sarcoma breakpoint region 1 using the numbering given in SwissProt entry Q01844

(GeneID 2130).

Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm

of 1.4 equals 1.0 mg of IgG.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined

experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot 1:5,000 - 1:15,000

Immunoprecipitation Not recommended. Rabbit anti-EWS Antibodies A300-417A and

A300-418A are recommended.

APPLICATION NOTES Western blot of lysates performed using standard western blot reagents and 4–8% SDS-PAGE.
