PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to TMEM33 immobilized on solid support. The epitope recognized by A305–597A maps to a region between residue 197 to 247 of human Transmembrane protein 33 using the numbering given in entry P57088.2 (GeneID 55161). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.			
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.			
	Western Blot	1:2	2,000 - 1:10,000
