PRODUCTION PROCEDURES Antibody was affinity purified using an epitope specific to CLCC1 immobilized on solid support. The epitope recognized by A305-667A maps to a region between residue 1 to 50 of human Chloride channel CLIC-like protein 1 using the numbering given in entry Q96S66.1 (GeneID 23155). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Immunoprecipitation 8 – 15 µl/mg lysate
