## **Product Information**

## Product ID C6800 CAS No. 294646-77-8 Chemical Name 2-(R)-(1-Ethyl-2-hydroxyethylamino)-6-(4-(2-pyridyl)benzyl)-9isopropylpurine Synonym Formula C24H29N7O Formula Wt. 431.54 **Melting Point** Bulk quanitites available upon request Purity ≥98% Product ID Size Solubility Soluble in DMSO or 100% C6800 1 mg ethanol C6800 5 mg

Store Temp -20°C

Ship Temp Ambient

Description (R)-CR8 is an analog of roscovitine that inhibits cyclin-dependent kinases (CDKs) 1/2/3/5/7/9; it displays anticancer and neuroprotective activities. (R)-CR8 induces apoptosis and downregulates expression of Mcl-1 in neuroblastoma cells. In chromic myelogenous leukemia (CML) cells, (R)-CR8 inhibits cell cycle progression. In animal models of spinal cord injury, this compound decreases neurodegeneration, cognitive decline, and microglial activation. CR8 also decreases sensorimotor deficits, cognitive deficits, and lesion volume by limiting cell cycle activation in animal models of traumatic brain injury.
