Product Information

Product ID T7156

CAS No. 105826-92-4

Chemical Name 1H-Indole-3-carboxylic acid (3-endo)-8-methyl- 8-azabicyclo[3.2.1]oct-3-yl ester monohydrochloride

Synonym Navoban, Novaban

Formula C₁₇H₂₀N₂O₂ • HCl

Formula Wt. 320.82

Melting Point 283-285°C (dec)

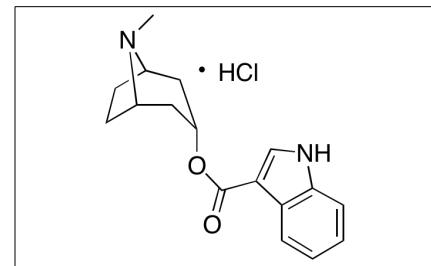

Purity ≥98%

Solubility Soluble in water.

Store Temp 4°C

Ship Temp Ambient

Description Tropisetron is an antagonist at 5-HT₃ receptors and partial agonist at α₇ nicotinic acetylcholine receptors (nAChRs) that exhibits antiemetic, analgesic, anti-inflammatory, nephroprotective, neuroprotective, and anti-fibrotic activities. In animal models of nephrotoxicity, tropisetron decreases levels of TNF-α, IL-1B, and iNOS and improves renal pathology. Additionally, tropisetron increases survival of glutamatergic neurons by decreasing levels of p38 MAPK and inducing NMDA receptor internalization in vitro. Tropisetron also inhibits collagen synthesis and fibrosis in animal models of scleroderma.

Bulk quantities available upon request

Product ID **Size**

T7156 10 mg

T7156 50 mg

T7156 100 mg
