Product Information

Product ID V3276

CAS No. 59-02-9

Chemical Name D- α -tocopherol

Synonym

Formula $C_{29}H_{50}O_2$

Formula Wt.

Melting Point 2-4°C

Purity $\geq 97\%$

Solubility

Store Temp 4°C

Ship Temp Ambient

Description Vitamin E in its natural form is also known as D- α -tocopherol; it exhibits antioxidative, anti-inflammatory, anti-atherosclerotic, anti-hyperlipidemic, and anti-diabetic activities. In keratinocytes, vitamin E decreased UVA-induced upregulation of IL-8 and AP-1 binding and decreased activity of NADPH oxidase and formation of malondialdehyde. When administered clinically, vitamin E decreases ROS, lipid oxidation, secretion of IL-1 β , and endothelial cell-to-monocyte adhesion. Vitamin E is also protective against retinal edema in animal models of ischemia/reperfusion. Additionally, vitamin E inhibits intracellular adhesion molecule 1 (ICAM-1)-induced activation of PKC in endothelial cells. In vivo, this compound decreases serum triglycerides, VLDL, PPAR γ and malondialdehyde levels and increases PPAR α levels, improving insulin resistance. Vitamin E also inhibits PKC-DAG signaling and increases glomerular filtration rate (GFR) and decreases albuminuria, showing nephroprotective benefit in animal models of diabetic nephropathy.

Bulk quantities available upon request

Product ID	Size
V3276	10 g
V3276	100 g
V3276	250 g
