Product Information

Product ID W0274
CAS No.
Chemical Name
Synonym
Formula $C_{19}H_{15}NaO_4$
Formula Wt. 330.31
Melting Point
Purity $\geq 98\%$
Solubility Water to 100mM

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
W0274	1 mg	\$107.00
W0274	5 mg	\$428.10
W0274	25 mg	\$1355.60

Store Temp 4°C
Ship Temp Ambient

Description Warfarin is an orally available antithrombotic commonly used for preventing blood clot formation and migration. Warfarin is a derivative of coumarin; the S enantiomer is somewhat more potent than the R enantiomer. This coumarin inhibits the subunit 1 of the vitamin K epoxide reductase complex (VKORC1), depleting the reduced form of vitamin K (KH₂) and inhibiting the formation of coagulation factors II, VII, IX, and X. Warfarin has a relatively slow onset and requires 1 to 2 days to take effect. This compound is highly sensitive to a wide variety of genetic polymorphisms and is metabolized by cytochrome P450C9; it also interacts with many other medications and foods, requiring diligent activity monitoring.
