<b>PRODUCTION PROCEDURES</b>	Antibody was affinity purified using an epitope specific to ADAMTS13 immobilized on solid support. The epitope recognized by antibody maps to a region between residues 1377 and the C-Terminus (residue 1427) of human ADAM (a disintegrin-like and metalloprotease) metallopeptidase with thrombospondin type 1 motif, 13 using the numbering given in entry NP_620594.1 (GeneID 11093).
<b>APPLICATIONS</b>	Goat anti-ADAMTS13 affinity purified antibodies were coupled to agarose beads using a cyanogen bromide method. Final concentration is 0.1 mg antibody in 0.4 ml of 50% slurry containing 0.2 ml agarose. Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.
