

Product datasheet

UBIQUITIN CHICKEN POLYCLONAL ANTIBODY

SKU: MM-0242-P

100 µg

OVERVIEW

Clonality:

Polyclonal

Host:

Chicken

Target:

Ubiquitin

Clone ID:

Preservative:

Ampicillin and streptomycin, 0.05% sodium aside.

Format:

Lyophilized purified total IgY in PBS pH7.4

Recommend starting dilution:

Reconstitute with deionized water. Optimal dilution has to be determined by the user.

Limitations:

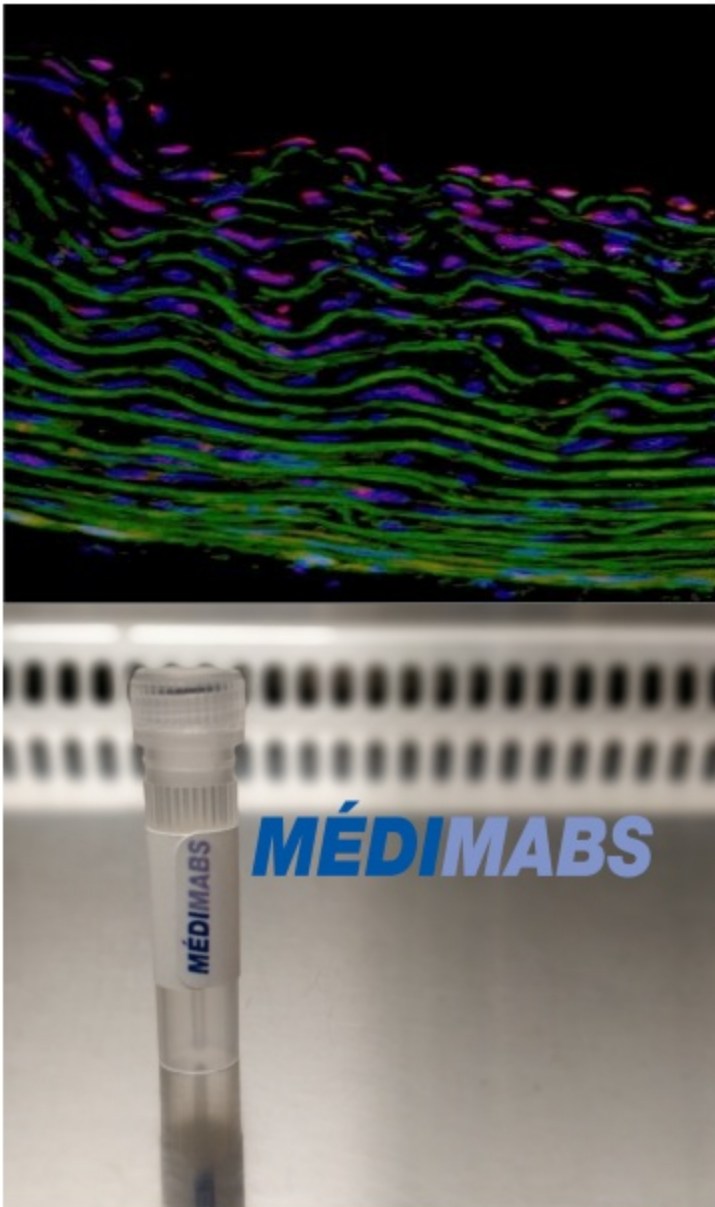

Research Use Only

References:

Storage:

Lyophilized antibodies can be kept at 4°C for up to 3 months and should be kept at -20°C for long-term storage (2 years). To avoid freeze-thaw cycles, reconstituted antibodies should be aliquoted before freezing for long-term (1 year) storage (-80°C) or kept at 4°C for short-term usage (2 months). For maximum recovery of product, centrifuge the original vial prior to removing the cap. Further dilutions can be made with the assay buffer. After the maximum long-term storage period (2 years lyophilized or 1 year reconstituted) antibodies should be tested in your assay with a standard sample to verify if you have noticed any decrease in their efficacy.

Image:

Paraffin embedded pig artery tissue section was stained for ubiquitin presence with the anti-chicken IgY. The reaction was visualized with anti-chicken antibody (red), DNA was stained with DAPI (blue) and elastin layer is stained in green. Ubiquitin is shown in significant nuclear staining in the upper smooth muscle cell layer as well as in the endothelial cells.
