

## PRAC Protein

### Catalog number

P5590-01

### Supplier

United States Biological

PRAC is a novel gene that is expressed in human prostate, prostate cancer, rectum and distal colon. The nuclear localization, identification of potential phosphorylation sites, and possible cotranscription with the Hoxb-13 gene suggest that PRAC may have a regulatory role in the nucleus.

### Applications

Suitable for use in Western Blot. Other applications not tested.

### Recommended Dilution

Optimal dilutions to be determined by the researcher.

### Storage and Stability

May be stored at 4°C for short-term only. For long-term storage and to avoid repeated freezing and thawing, aliquot and store at -20°C. Aliquots are stable for at least 12 months at -20°C. For maximum recovery of product, centrifuge the original vial after thawing and prior to removing the cap. Further dilutions can be made in assay buffer.

### Immunogen

Polyclonal recombinant human PRAC protein

### Formulation

Supplied as a liquid.

### Purity

Purified by immunoaffinity chromatography.

### Specificity

Reacts with the human PRAC protein.

### Product Type

Pab

### Source

human

### Isotype

IgG

### Grade

Affinity Purified

## Applications

WB

## Crossreactivity

Hu

## Storage

-20°C
