# Gene Control Without Gene Editing

The field of epigenetics refers to the control or modulation of gene expression that produces a specific phenotype or trait without directly changing DNA sequences. Epigenetic control can occur by modifying DNA, RNA, or by modulating the proteins that bind to DNA, particularly histone proteins. Epigenetic modifications start early in embryonic development and continue as organisms age and are strongly influenced by environmental factors. Epigenetic mechanisms are now important therapeutic drug targets spanning several disease areas, including multiple cancers, myelodysplastic syndromes, autoimmunity, neurodegeneration, and more.

## Chromosome

Epigenetic control of DNA expression can occur through several mechanisms. Some primary mechanisms include DNA methylation, histone acetylation and histone methylation. The process of addition and removal of these functional groups involves an array of proteins, many of which are indicated in the figure above. These modifications alter chromatin structure and DNA accessibility, thus either preventing or allowing promoter and enhancer regions to be recognized by transcription factors to initiate gene transcription. In addition, there are families of proteins that recognize and bind to these modifications, known as acetyl-lysine readers or methyl-lysine readers, further exerting epigenetic control. Histone can also be further modified by a large number of post-translational modifications, including phosphorylation, ubiquitination, sumoylation, ADP-ribosylation, citrullination, O-GlcNAcylation, and others. In addition to DNA and histones, RNA modifications can also influence translation, resulting in distinct phenotypes, including diseases that are associated with specific RNA modifications.

Our products and services include novel assay kits and bioactive recombinant proteins optimized for drug discovery. The portfolio includes complete sets of specific protein families not found elsewhere. Read on to learn how our solutions can solve your challenges in epigenetic drug discovery.

# Our Advantages

## Produced In-House

- Made in the USA at our San Diego, CA laboratory
- Get customized, personal support directly from the source

## Committed to Excellence

- ISO 9001:2015-certified Quality Management System
- Lot-specific quality testing

## Protein Expression & Screening Services

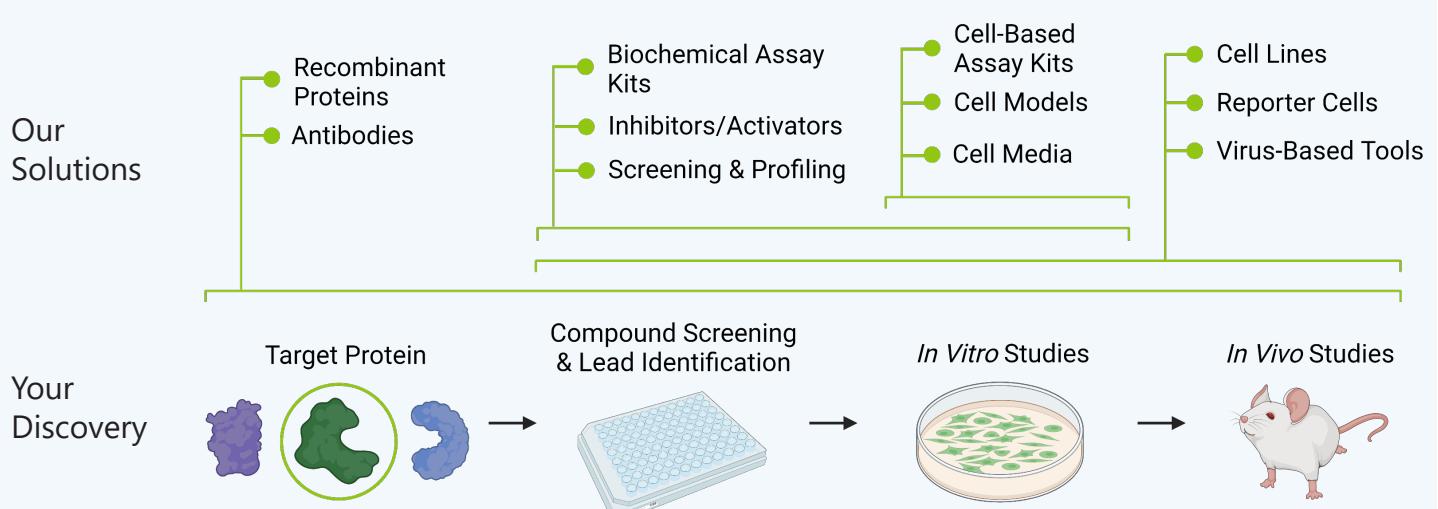

- Screening & Profiling: 110+ biochemical assays to screen your compounds of interest
- Custom protein expression: choice of tags, labeling, expression system, and QC

## Expansive Portfolio

- Assay-ready recombinant proteins: 250+ active epigenetic proteins including complexes
- 175+ inhibitor screening assays
- Substrates - histones, octomers, & nucleosomes, including biotinylated versions
- Full HDAC and sirtuin suite
- Most extensive DNMT offering on the market

## How we drive drug discovery

Created with [BioRender.com](#)

# Bioactive Recombinant Proteins

BPS Bioscience specializes in manufacturing bioactive enzymes and protein complexes, offering over 2000 protein products critical for drug discovery. Our epigenetics portfolio consists of over 250 proteins covering complete families of enzymes involved in acetylation and deacetylation, methylation and demethylation, and RNA modification, as well as Bromodomain proteins (acetyl-lysine readers) and methyl-lysine readers.

Protein and peptide substrates, ligands, and small molecule inhibitors are also available.

Protein options include:

## HiP™ Proteins (High Purity, Low Aggregation)

- >90% purity
- Verified via HPLC to guarantee <10% aggregation
- Ideal for studying enzyme activity, ligand binding, protein folding, and more

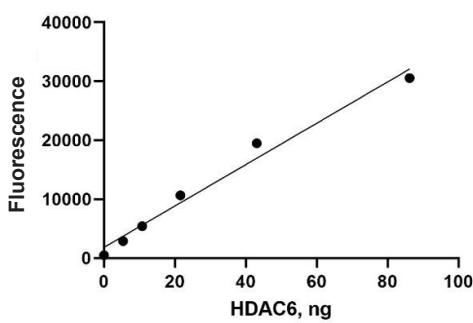

## Bulk Production and Customization

Product sizing, formulations, tags, mutations, and activity testing can be customized to meet your research needs.

## Featuring

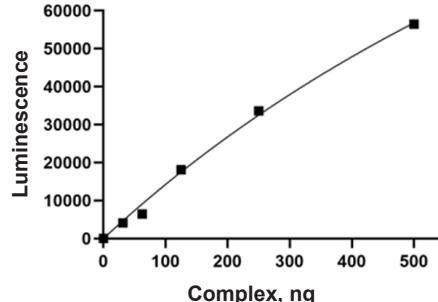

- Active complexes, including DNMT3A/DNMT3L, EZH2/EED/SUZ12/RbAp48/AEBP2, METTL3/METTL14, and more
- Recombinant and native Histone proteins, including tetramers and octamers, with or without tags
- Small molecule inhibitors to establish positive controls for enzyme inhibition
- Mutant and wild-type versions for EZH2, Histone H3, and HDAC6.

### HDAC6 Specific Activity

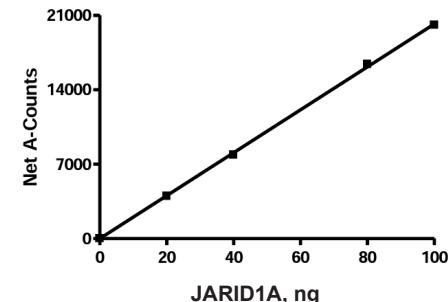

Measurement of HDAC6 activity using a fluorogenic substrate, according to BPS Bioscience #50076, HDAC6 Fluorogenic Assay Kit.

### EZH2/EED/SUZ12/RbAp48/AEBP2 Specific Activity

Measurement of EZH2/EED/SUZ12/RbAp48/AEBP2 complex activity according to BPS Bioscience #52009L, EZH2 Chemiluminescent Assay Kit.

### JARID1A Specific Activity

Measurement of JARID1A demethylation activity using an AlphaLISA® -based assay according to BPS Bioscience #50510, JARID1A Homogeneous Assay Kit.

# Biochemical Assay Kits

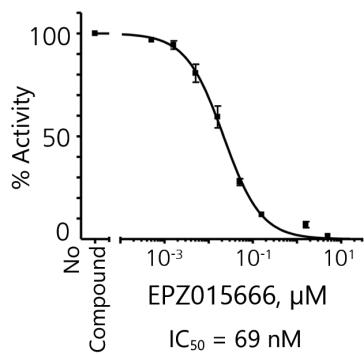

Our 175+ epigenetic assay kits enable your compound and biotherapeutic drug discovery by providing specific, highly sensitive analysis in a variety of formats. Many of our kits are provided as homogenous assays, with no wash steps, for efficient high throughput screening.

Compare the benefits of our assay formats:

	AlphaLISA™	Chemiluminescent	Colorimetric	Fluorescence Polarization	Fluorogenic	Luminescent	TR-FRET	UV Spectrophotometric	
High specificity	✓	✓	✓	✓	✓	✓	✓	✓	
High sensitivity with low background noise.	✓	✓		✓	✓	✓	✓	✓	
Simple operation	✓		✓	✓	✓	✓	✓		
Homogeneous, no-wash format makes it simple for high throughput screening.	✓		✓	✓	✓	✓	✓		
Real-time readings do not require equilibrium conditions.	✓		✓	✓		✓	✓		
Small volume reactions save on sample consumption.	✓		✓			✓	✓		
Large dynamic range, up to 4-5 logs.	✓	✓			✓				
Highly stable signal allows for repetitive measurements.			✓			✓			
Common, low-cost instrumentation		✓				✓			
Use of lanthanide donor fluorophores minimizes photobleaching.					✓				

Comparison of PRMT5 activity inhibition by EPZ015666 across three assay formats:

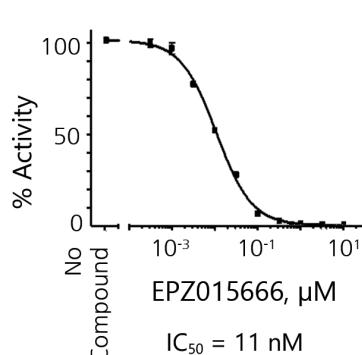

Chemiluminescent Assay

TR-FRET Assay

AlphaLISA® Assay

# Screening & Profiling

BPS Bioscience offers rapid and dependable screening services to determine potency and selectivity of small molecules, peptides, and antibodies against 110+ kinase targets. Our team of experts along with our broad services portfolio make it easy to:

- Screen for inhibitors/targets across full protein families
- Select from IC<sub>50</sub> determination and single point concentrations
- Perform follow-up studies using the same proteins manufactured in-house
- Get questions answered or project guidance in a time-efficient manner

## Our Deliverables to You

### Detailed Results

Extensive report with raw and analyzed data, graphs, and detailed protocols. Typically includes positive controls for inhibition.

### Fast Turnaround

Receive results within weeks after our receipt of your compounds.

### Quality & Consistency

Proteins and enzymes synthesized and QC'd in-house to ensure the highest level of inter- and intra-assay consistency.

### Extensive Selection

Choose from over 200 in-house developed epigenetics-relevant assays, including many novel assay kits.

### Platform Options

Choose the format that works best for your experiment or perform orthogonal testing on multiple platforms to verify your results.

## Key Targets

Deacetylases		Methyltransferases						Demethylases	
HDACs	Sirtuins	DNMTs	EZHs	PRMTs	SETDs	SMYDs	KDMs	TETs	
HDAC1	SIRT1	DNMT1	EZH1	PRMT1	SETDB1	SMYD2	LSD1, LSD2	TET1	
HDAC2	SIRT2	DNMT3A	EZH2	PRMT3	SETD2	SMYD3	FBXL10, FBXL11	TET2	
HDAC3	SIRT3	DNMT3B	EZH2 (A677G)	PRMT4	SET7/9	SMYD4	JMJD1A, JMJD1B
